

Financial Systems Solutions

Our financial systems resources embody a unique combination of skills that continue to grow in value and are in increasing demand by clients requiring on-time and on-budget solution implementations.

The background and experience of our resources are a perfect blend of deep accounting and finance expertise with a strong understanding of information technology and the application of large scale Enterprise Resource Planning (ERP) systems.

The hybrid skill sets of our resources prove invaluable to clients experiencing difficulties uploading or analyzing financial information using new ERP systems. Whether needing interim help with implementation or deployment of financial systems solutions, Etonien resources have the experience to ensure successful transitions.

We can offer an experienced resource to handle the day to day department roles in accounting, finance, tax and internal audit in order to free up your staff to focus on using the new ERP system. Alternatively, we can train your staff directly and help them to retain practical end user knowledge of a variety of large scale ERP systems.
